

Dear Jane Henney

5408 99 SEP 23 P2:12

It takes a lot for me to be upset enough to write a letter. I felt very much in the dark to discover that genetically engineered foods is something I'm already using in my home; without my knowledge has made it unbearable. I understand 70% of my shelves are stocked refrigerator & cabinets with genetically engineered foods. I've done my homework to discover there is no nutritional value & causes allergies.

No wonder half the world is on anti-depressant & running off to Nutritionist.

Doesn't this ~~hurt~~ you as well? I'm hoping your in a better position than I ~~am~~ to do something about this.

First of all I would like it . .  
stopped until a safer means  
is found . Secondly in the  
meantime lets Label all of  
these foods so all people  
know what's going on.

Please reply

Sincerely -

Aileen Bernardo

P.S.

What can I do to help.

I own a hair salon & I'm getting  
signatures for Mothers for Natural law.
